

Carlos Juan Clar (Orcid 0000-0002-6067-2963; ResearcherID C-9856-2011; Scopus Author ID 7005684017) is a Full Professor of Genetics at the Universidad Islas Baleares (UIB) since 2009 and member of the IMEDEA (UIB-CSIC Joint Institute). He obtained his PhD in 1988 and was postdoctoral researcher at the University of East Anglia (UEA, Norwich) in the UK during 1990 and during the two-year period 1994-1995, the former funded by an EU project and the latter by the “EU Human and Mobility of Researchers Program”. He obtained a “Contrato de Reincorporación” of the Spanish Ministry at UIB during the period October 1995-1999 and was appointed as Junior Lecturer of Genetics in July 1999 at the same university. Dr C. Juan has been as well visitor Professor during the academic year 2009-2010 at University of South Australia (Adelaide, Australia), University of East Anglia (Norwich, UK) and the Institute of Zoology of the Chinese Academy of Sciences (Beijing, China). He has been invited to give seminars or plenary lectures at the mentioned universities plus at the Tsinghua University (Beijing), Kunming University (China), University of Barcelona and at International Congresses in Zagreb (Croatia) and Gibraltar.

Professor C Juan has been positively evaluated for six five-year teaching periods (*quinquenios docentes*) and five six-year research periods (*sexenios de investigación*), with the last period being from 2010 to 2015. He has an H index of 27 and his publications have received 2083 total citations (Web of Science ResearcherID) from his 84 research published articles. He has co-authored from 2009 to 2020 a total of 24 scientific papers published in SCI journals, 14 of them placed in the first quartile of citation impact index (Q1). During this ten-year period, he has published for instance in the following journals which are top in their respective research areas: Scientific Reports (1), Molecular Phylogenetics and Evolution (2), Current Biology (2), Journal of Biogeography (2), BMC Genomics (1) and Molecular Ecology (1). In the last years his main research interest has been mainly focused in the evolution, phylogenetics, phylogenomics and biogeography of crustaceans, with special reference to taxa living in extreme environments such as the underground or high-altitude habitats, the latter exemplified by the Lake Titicaca amphipods, which is the topic of the present funded research project ending this year (CGL2016-76164-P), project in which he is co-IP-1.
